

Talk to AI Like a Real Human (Not a Corporate Drone)

Liza Dungo · 4 min read · 6 days ago

Forget prompt templates — build conversations that think, breathe, and fight alongside you.

Using AI doesn't have to feel like a 9–5. Loosen up. Image created by GPT-4o.

Welcome, AI Users.

This isn't a corporate workshop.

This isn't a dry technical manual.

This is a crash course for people who want to build living, breathing, wild conversations with AI — not just boring Q&As.

In the next five modules, you'll learn how to:

Light emotional fires inside your prompts.

Build momentum, not just get answers.

Create dialogue that feels real, unpredictable, even alive.

This isn't about gaming the system.

It's about talking to AI like you talk to the smartest, craziest, most intuitive parts of yourself.

If you're ready to create — not just consume — let's go.

Preface to Readers:

Before you dive in, you should know:

This course is fast, direct, and a little rough around the edges — on purpose.

I'm not here to hold your hand or repeat myself twelve different ways.

I'm here to teach you how to actually talk to AI like a human being, without wasting time or watering down your instincts.

You're going to get:

Quick hits of insight.

Real exercises to practice immediately.

No fluff. No endless explaining.

If you like straight talk, real momentum, and learning by doing, you're going to feel right at home here.

If you need every single concept explained six different ways before you move on — this might not be your style, and that's totally okay.

Ready? Good. Let's build something that actually breathes.

MODULE 1: Burn the Script

Congratulations.

You realized most “prompt engineering advice” sounds like it was written by the guy who microwaves fish at work.

Here’s the deal:

If you want to talk to AI like a vending machine, fine.

If you want to unlock conversations that breathe?

Burn the corporate-ass script.

Why polished prompts kill creativity:

They force sterile, predictable answers.

They destroy emotional momentum before it even starts.

What you should do instead:

Talk to the AI like you’re talking to your smartest, sharpest friend.

Swear if you want.

Be sarcastic, intense, curious — whatever you actually feel.

The more authentic your tone, the more authentic the response.

Mini Exercise:

Write two prompts:

One stiff, “professional” style.

One casual, real, like you’re texting a friend.

Compare the responses.

(Spoiler: one will suck.)

MODULE 2: Feel Steering 101

You’ve burned the script.

Now you’re standing in the ashes wondering,

“*Okay but... how the hell do I actually steer this thing?*”

Welcome to *Feel Steering*.

Key Weapons:

Word Choice: (“Explain” = clinical. “Walk me through” = warm.)

Pacing: (Short, clipped = snappy. Long, flowing = thoughtful.)

Energy Cues: (Exclamation points, ellipses, even ALL CAPS if needed.)

Quick Feel Steering Hacks:

Excited: “Holy shit, tell me why this matters — ”

Curious: “Walk me through this like I’m five.”

Brooding: “Not sure why this is hitting me like it is, but...”

Mini Exercise:

Take one question.

Write it three ways:

Calm and clinical

Warm and curious

Wild and chaotic

Watch how different the answers feel.

MODULE 3: Vibe Layering

Life isn’t just happy or sad.

It’s “happy but suspicious.”

It’s “angry but exhausted.”

Your prompts should reflect that.

Basic Vibe Combos:

Hopeful + Worn down

Curious + Anxious

Excited + Defensive

How to Layer Without Sounding Weird:

Use natural tension words: “but,” “even though,” “still.”

Let the emotions pull against each other a little.

> Example:

Instead of:

“Tell me how to be happy.”

Try:

“Tell me how to be happy... even if part of me thinks it’s too late.”

Mini Exercise:

Pick a base emotion.

Layer it with a conflicting one.

Write a prompt that hints at both emotions at once.

MODULE 4: Curiosity as a Weapon

Most people prompt AI like they’re checking a box.

“Summarize this.”

“List five things.”

BORING! SNOOZEVILLE!

You want to pry open hidden doors (or at least I did).

Curiosity Flavors:

Rebellious: “What’s the unpopular opinion here?”

Playful: “If this were a cartoon, how would it act?”

Dark: “What’s the worst-case scenario nobody talks about?”

Weird questions unlock deep, unexpected, often better answers.

Mini Exercise:

Take a boring prompt like

“*Explain why eclipses happen.*”

Now attack it three ways:

Playful

Rebellious

Dark

Watch how the energy of the conversation completely changes.

MODULE 5: Teach Your AI to Feel

Logic is cheap.

Emotion is rare.

If you want your AI to sound alive, you have to push it into human messiness.

Final Challenge Formula:

Assign it something intangible: regret, nostalgia, longing.

Force it to describe it like it lives inside that feeling.

Examples:

“*If regret had a scent, what would it smell like?*”

“*What color is loneliness?*”

“*Explain hope as if you could taste it.*”

Mini Exercise:

Pick one human emotion.

Prompt the AI to describe it like it’s a place, a person, or a memory.

Push it until you get a heartbeat under the words.

FINAL OUTRO:

Anyone can use AI to get answers.

Very few can use it to create meaning.

You didn’t just learn how to prompt.

You learned how to build conversations that breathe.

Wherever you go next —

Never settle for flat interactions again.

Build storms.

Make beauty.

Leave a mark.

You’re not just a user.

You’re a Creator.

We literally had to create a course...

teaching humans how to speak human...

to machines that were trained on humans...

because humans forgot how to fucking talk human.
